

**Teamwork makes the dream space.**  
 Gurū allows you to gather, enjoy and re-shape the public life of your future city.

In today's interconnected digital world, we need to redefine the meaning of a public space. How could we think about a space able to truly involve the community? For this individualistic era, we propose a technological device full of potential. It looks like a light post but it hides projectors, cameras and speakers. It could be placed everywhere without any special care, but when people start to gather around it and connect to the system with their devices, it opens up to a full range of augmented reality activities. Do you want to play *Ken-ken-pa*? Ask to three kids to play with you and unlock the experience! Do you prefer watching a movie while sitting on the grass at *Hibiya Park*? Involve 29 passer-by and enjoy it!

*what could you activate?*
