

#printyourcity

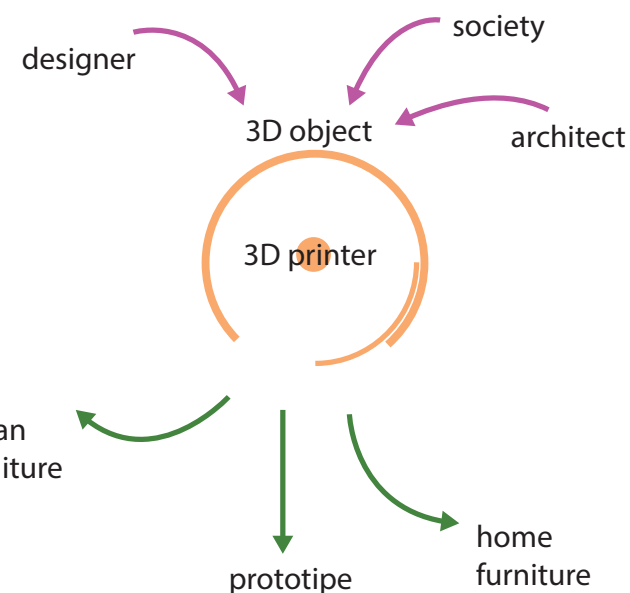

#printyourcity is an idea of contamination of the city through direct manipulation of citizens.

Inserting a 3D printer in the neighborhoods through a touch screen oled integrated into the structure of the glass cylinder will ensure that everyone can at a small cost produce what they need immediately, both for their home, both to enjoy the city.

3D printer will be fastest, Companies, designers, architects, etc., will include small and medium-sized 3D projects or modular objects to be used by citizens and reorganize the city according to new needs in a few minutes.

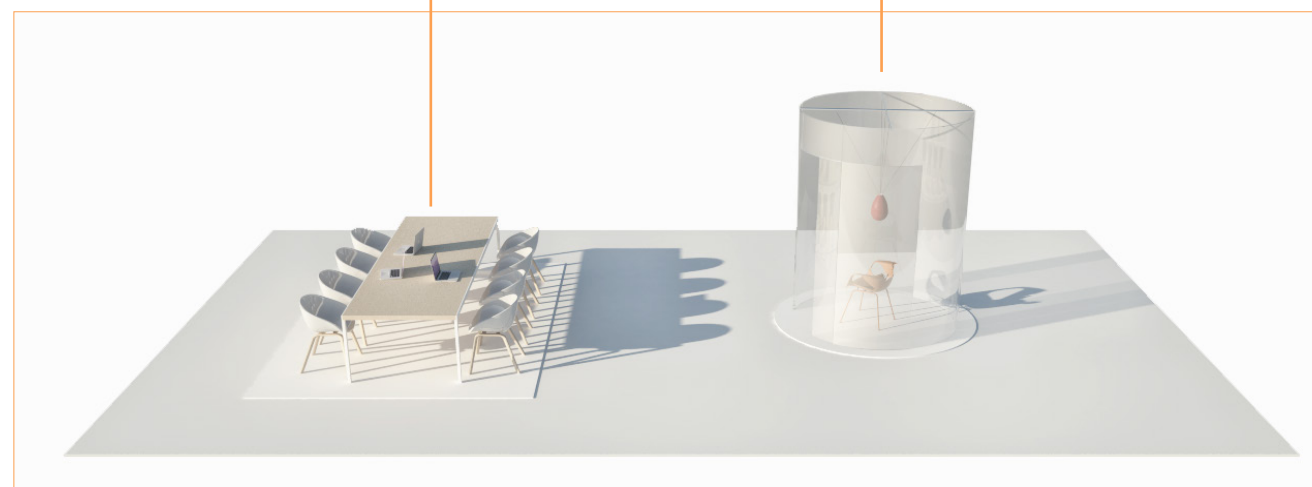

It will be possible that entire communities with the help of professionals or even alone can create structures that can be assembled to create urban furniture for squares and spaces for socializing.

The citizens will organize the times of urban change.

newly self-built space with the 3D printer, new chairs and new table self-built.

3D printer community, every people can change the city

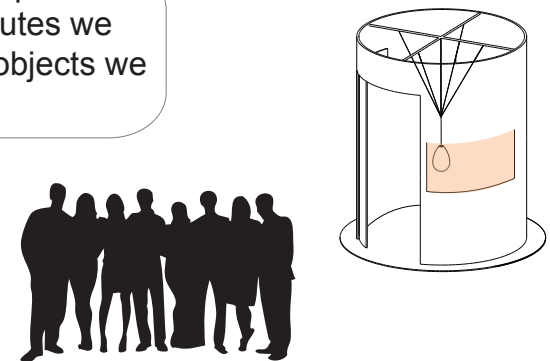

we build
our city

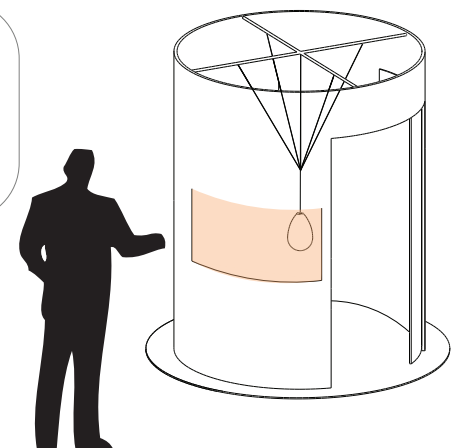

we begin to reappropri-
ate the square that
today has nothing

let's start with
some chairs and
tables

let's go to the 3D printer
and in a few minutes we
will have all the objects we
need

on the OLED screen there
are already loaded many
object libraries.
NOW we produce the
chairs.

we have a new square

10 MINUTES LATER
