## RED GAMING KOIs

Over the last years, more and more people have been choosing videogames as their main form of entertainment. However, despite the increase in popularity of multiplayer or cooperative games, as well as the emergence of conventions and competitions of e-sports, videogames are still too linked to individuality and the private domain.

RED GAMING KOIs is a project that takes both virtual games and their players to the public realm, claiming their place within the clogged urban space. High-tech devices that serve as physical platforms for cell phones, with local network to chat and play, and light projectors over the pavement at night. The RED KOIs are adding the much needed human proximity to the entertainment of the future.

Another piece of the city that takes part in your daily routine.

So go out and play, fellow gamer!

### MEETING POINT

waiting for someone? Meet them at the RED KOIs! They are visible and distinctive from afar, and you can amuse yourself while waiting!

### RED KOI CHAT

being shy is not a problem when it comes to getting to know people anymore! Near these devices a RED KOI chat is available in your cell phone, so you can chat, ask for directions or say hi at a safe distance

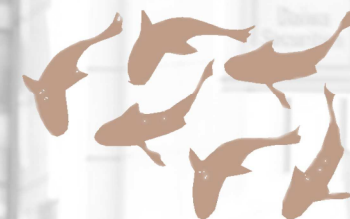

### RED KOI GAMES

if you are not much of a talker, don't worry! you can still share great moments playing videogames with other people!

### BUT... WHY KOI?

koi are varieties of common carp, a well-known worldwide fish. Yet at the same time, this particular breed is a symbol of Japan, linked to terms like "love" or "friendship". Koi are a perfect inspiration to create this international japanese device.

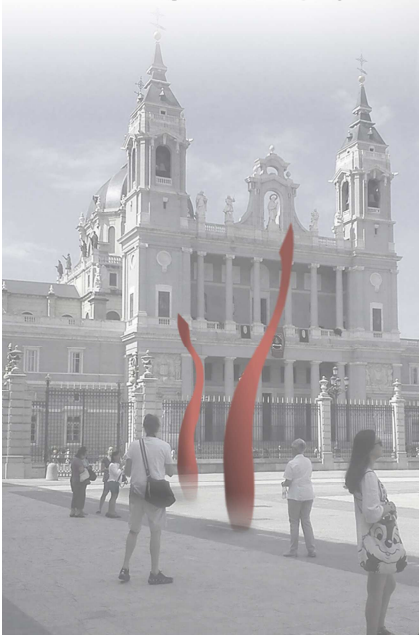

### WIRELESS CHARGER

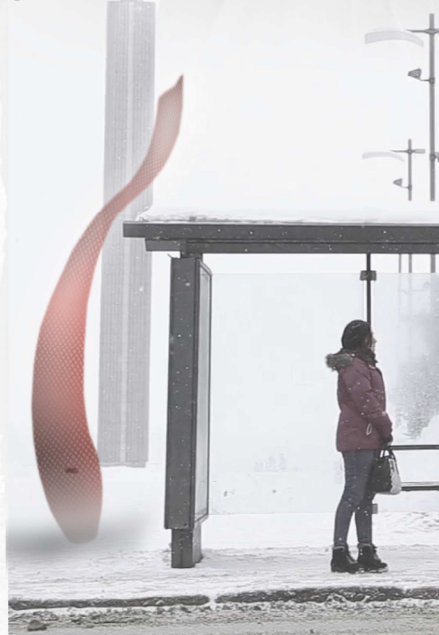

the daily routine sucks your cell phone energy up. Just approach the RED KOIs and wait some time to charge the battery back. You can play or chat with other people in the meantime!

### INTERNATIONAL CONCEPT

RED GAMING KOIs can be part of your routine, no matter where you live. They will charge your phone, keep you entertained, light the street under heavy rain... Look out for them in your city!

MADRID

MOSCOW

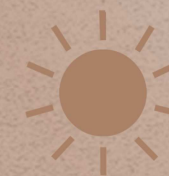

DUBLIN

### SELF-SUPPORTING STRUCTURE

the parametric structure and internal pieces are calculated to make every device heavy, stable and rigid without foundation

### SELF-PRODUCED ENERGY

patented red solar panels shaped like hexagonal fish scales provide all the energy needed

### CLEAN & PORTABLE

the urban pavement is not damaged, the air is not polluted. The devices can be easily removed or relocated at any moment

## FUN AT ANY AGE

the games implemented in the RED KOIs are chosen by each city government, and can be regulated by passwords to assure parental control. These games are meant to be played by all citizens, so the selection of a high variety is encouraged

## FREETIME!

the lighting devices and projectors are activated after work/study hours. The best moment of these KOIs' day is also the best moment of your day. Enjoy your freetime together!

## SPECTATORS

casual competitions among friends can bring other people willing to watch a good game. This is an improvement over the traditional devices in the relationship between players and spectators

## PARAMETRIC DESIGN 3D PRINTED!

the parametric structure is 3D printed. The pieces are therefore quite cheap and easy to produce, build and transport.

## urban distribution

RED GAMING KOIs are ideal for heavily populated areas -like Ginza, Tokyo-, with many daily interactions. The same way the actual koi swim together, these devices should be arranged in groups, preferably around key points of the city. The accumulation of KOIs will attract many people, assuring a good service at day and a very interesting spectacle at night.

## COMPLEMENTS

either the city government or the people can bring some pieces of furniture to improve the experience. RED KOIs are very open to work with other urban proposals to promote urban activities!
