

CO:VIBE

Music is a reflection of our identity.  
Yet cities are a silent mashup of tunes not heard, with everyone sound-designing their lives, in the intimacy of their headphones.  
Is there a way to echo  
our individual musical diversity?

Co:Vibe is a speaker-based co-creation device that connects you with others in a real-time experience to uncover, capture and broaden the sound of the community. Through the app, you can localise the closest speaker in your neighborhood, connect and add your favourite song to the playlist. Everyone who is connected can have partial control over the song played by skipping to the next track on the app. When enough people collectively do so, the speaker will skip to the next song. With Co:Vibe you can be engaged as a co:listener and co:player to co-create the city soundscape through a fair listening experience for everyone.
