

MESH BOMBING

Ginza, Japan

LOCATION PLAN

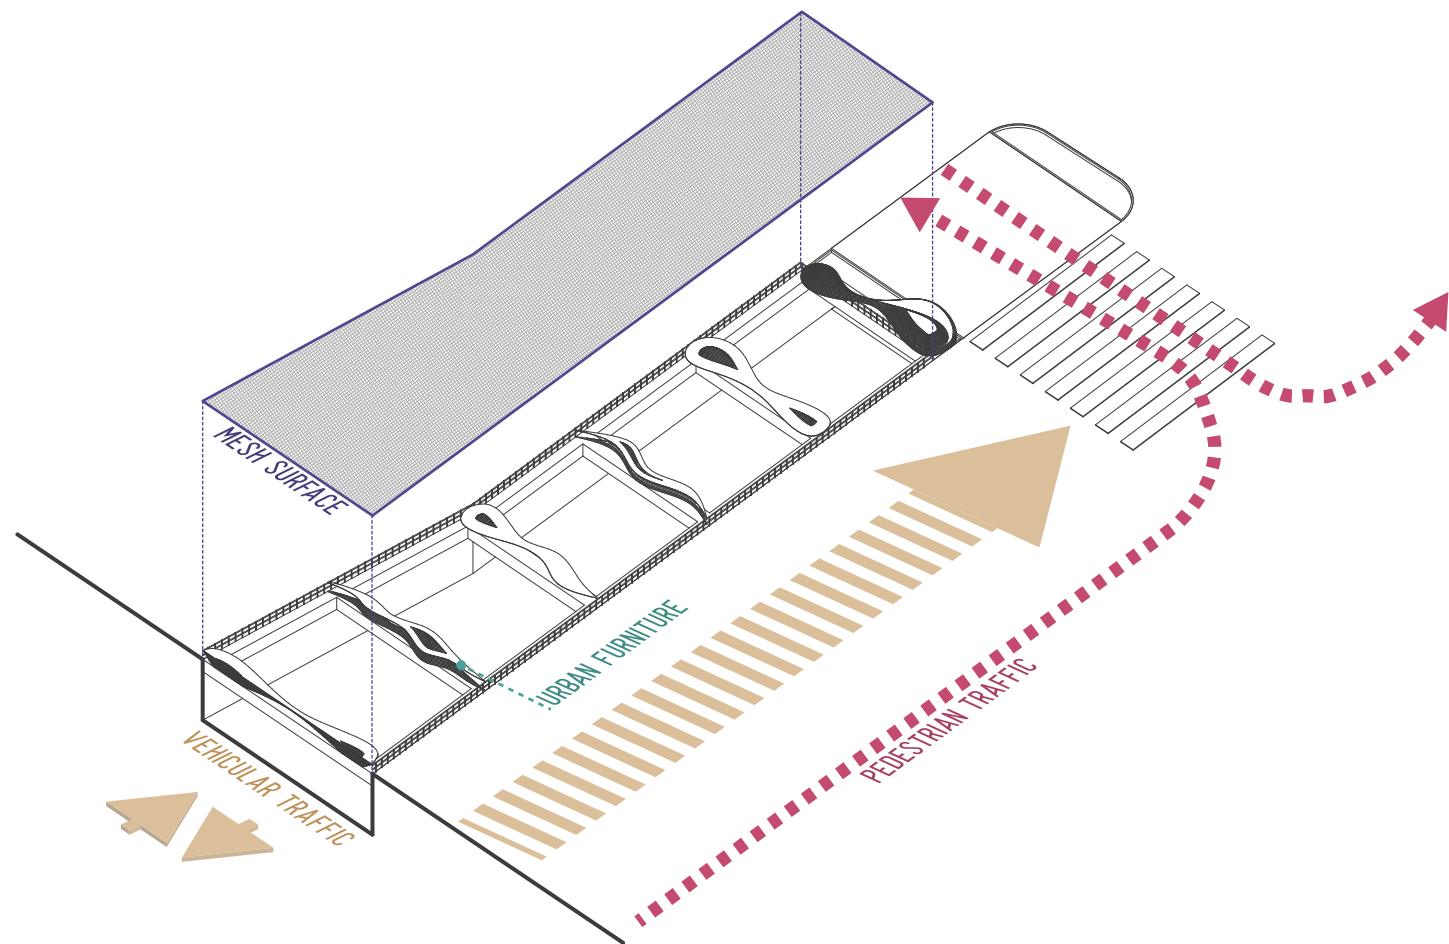

Mesh Bombing is about to revitalize the urban space that the development around the vehicles has taken away from the citizen, especially the resultant space from the subterranean vehicular roads. This spaces can not be utilize by the pedestrian and also can not be use by the cars. This generates a number of residual zones around the cities.

The propousal for Mesh Bombing is to re-use this spaces by creating a mesh above the tunnel, generating a surface that can support citizens. By utilizing the beams in the tunnel structure it can be placed a number of public furniture, that helps support the mesh and provide an estabale

MESH BOMBING

INTERVENTION PROPOUSAL

The resultant space from the interactions between the vehicular traffic in the tunnel, the vehicular traffic above and the pedestrian traffic gets the intervention of Mesh Bombing that generates a public space for the city.

URBAN FURNITURE

The furniture is created by repeated planes of wood cut by a CNC machine.
